

# Vistrian Inc. Releases Manufacturing Intelligence Software Version 6.0 of FactoryLOOK

## **Vistrian manufacturing intelligence dashboards offer corporate wide visibility**

**October 12, 2012 (MMD Newswire) -- Vistrian, Inc., a private manufacturing intelligence software company based in Silicon Valley, has successfully released a new version of its flagship software product FactoryLOOK to high tech manufacturers.**

FactoryLOOK, being a "top layer" software platform, transforms client equipment data into intuitive dashboards and reports for greater analytical insights to make informed, data-driven decisions. The FactoryLOOK 6.0 software makes manufacturing intelligence faster, easier, and more user-friendly. Enhance productivity, monitor trends and discover anomalies, and forecast business opportunities. FactoryLOOK 6.0 provides a high performance, scalable enterprise manufacturing intelligence platform capable of delivering deep insight with equipment interactive dashboards and superior analytics to large user populations through Web browsers, mobile devices and Office applications.

Built using the latest development tools and database technologies, FactoryLOOK 6.0 is capable of managing all equipment operations and all workflow processes required for full manufacturing operations. FactoryLOOK 6.0 open architecture offers complete access to critical data and enables seamless communications and data flow between internal and external systems, while customer interfaces and vendor plug-ins help streamline implementation of this state of the art platform. Vistrian solution delivers substantial long-term value by making operations more efficient, accelerating the data collection process, streamlining communications, and expanding operational visibility.

Clients that use these new features see improved performance from their operations. Vistrian continues to work with manufacturers of Solar, Semiconductor, LED, Data Storage, and Networking industries to maximize efficiencies. Manufacturers are under increasing pressure to improve manufacturing operations and improve profit margins, and they are responding by ramping up product volumes in their own plants and optimizing internal resources with FactoryLOOK 6.0.

New features included in FactoryLOOK 6.0:

- Let companies manage large volumes of complex data efficiently.
- Enable organizations to make Manufacturing Intelligence actionable in real-time.
- Equipment and recipe management tools
- Multiple views into interactive dashboards with drag and drop ease.
- Roles based dashboards for operations management.
- New brand integration with PLCs, SCADA, and DCS equipment.

S. Suresh, COO of Vistrian Inc. states "The FactoryLOOK version 6.0 enables every user including those who are not professional developers to create and share interactive equipment reports and dashboards, which can then be viewed, customized, extended and drilled into by colleagues, executives, customers, suppliers and/or partners."

About Vistrian (<http://www.vistrian.com>)

Vistrian Inc. provides server-based "Manufacturing Intelligence" products that extract and process data from production tools, operator interfaces, databases and legacy systems. Customers obtain improvements in process management, process development speed, yield and utilization with Vistrian technology.

The company's products provide visibility for better decision-making using dashboards and visualization tools, which provides real-time access to key equipment and process performance metrics. Vistrian's systems are highly scalable and very cost-effective, providing its customers with significantly reduced Total Cost of Ownership (TCO). The company has successfully implemented its solutions in manufacturing operations worldwide.
